

Rulebook update #41516-1 B

The following will replace rule:

"Fuel Pump vacuum Line", Page #81

**in the Bandolero Car (engine specification rules)
section of the 2016 INEX Rulebook as of 4/15/16.**

Fuel Pump Vacuum Line: - It is permitted for the rocker arm covers to be swapped so that the fuel pump vacuum comes from the left rear cover. Using rocker arm covers with breather hoses in both covers is allowed. It is also permitted to drill & tap (3/16") the intake turndown and install a fitting to run the vacuum line to this fitting. 36" is the maximum length for this Vacuum line. For more information on this process, please contact US Legend Cars International.

The only change to this rule is the 36" length maximum on the vacuum line. (the rule went from 24" to 36")

Thank you for your cooperation,

INEX
